Typological analysis of public–private partnerships in the veterinary domain

The screenshot shows the PLOS ONE article page for the study titled "Typological analysis of public–private partnerships in the veterinary domain". The abstract discusses the nature of PPs in the veterinary sector, mentioning their role in providing services to both the private and public sectors. It highlights the diversity of PPs and the need for a typological analysis. The study involved a survey of 103 PPs in France, with 100 responses received. The results were used to identify four main types of PPs: 'Wandering', 'Holding', 'Hiring', and 'Partnership'. The 'Wandering' type is described as a PPs that are not embedded in a specific sector or industry, while 'Holding' and 'Hiring' types involve PPs that are part of a larger organization. The 'Partnership' type involves PPs that are formed through a formal agreement between two or more entities. The study found that PPs play a significant role in providing services to the veterinary sector, particularly in areas such as animal health, food safety, and environmental protection. The results of the study can be used to inform policy-making and improve the management of PPs in the veterinary sector.

The OIE is an international organisation created in 1924 with a mandate from its 182 Member Countries to improve animal health and welfare. Its activities are permanently supported by 312 centres of scientific expertise and 12 regional offices with a presence on every continent.
