This book provides an essential, comprehensive treatise on bovine tuberculosis and the bacterium that causes it, *Mycobacterium bovis*. Bovine tuberculosis remains a major cause of economic loss in cattle industries worldwide, exacerbated in some countries by the presence of a substantial wildlife reservoir. It is a major zoonosis, causing human infection through consumption of unpasteurised milk or by close contact with infected animals.

Following a systematic approach, expert international authors cover epidemiology and the global situation; microbial virulence and pathogenesis; host responses to the pathogen; and diagnosis and control of the disease.

Aimed at researchers and practising veterinarians, this book is essential for those needing comprehensive information on the pathogen and disease, and offers a summary of key information learned from human tuberculosis research.

### Table of contents

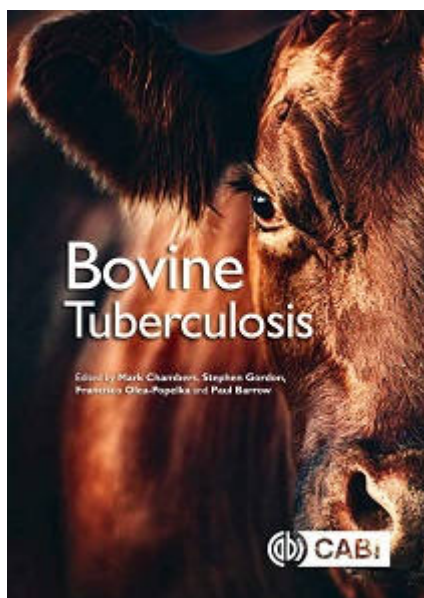

- 1: Bovine tuberculosis: worldwide picture
- 2: *Mycobacterium bovis* as the causal agent of human tuberculosis: public health implications
- 3: Economics of bovine tuberculosis: a One Health issue
- 4: The epidemiology of *Mycobacterium bovis* infection in cattle
- 5: *Mycobacterium bovis* molecular typing and surveillance
- 6: Bovine tuberculosis in other domestic species
- 7: Role of wildlife in the epidemiology of *Mycobacterium bovis*
- 8: Molecular virulence mechanisms of *Mycobacterium bovis*
- 9: The pathology and pathogenesis of *Mycobacterium bovis* infection
- 10: Innate immune response in bovine tuberculosis
- 11: Adaptive immunity
- 12: Immunological diagnosis
- 13: Biomarkers in the diagnosis of *Mycobacterium tuberculosis* complex infections
- 14: Vaccination of domestic and wild animals against tuberculosis
- 15: Managing bovine tuberculosis: successes and issues
- 16: Perspectives on global bovine tuberculosis control
