

THE OFFICIAL 2018-1

ACTIVITIES & PROGRAMMES

✘ OIE

Recognition of official disease status of non-contiguous territories, which are part of a country that already has an official OIE disease status

✘

At a meeting held from 12 to 16 February 2018, the OIE Scientific Commission for Animal Diseases (Scientific Commission) discussed the situation of non-contiguous territories of Member Countries which already had an officially recognised disease status. Since some Members wished to include non-contiguous territories that were not specified in the initial application for disease-status recognition, the Scientific Commission endorsed a transparent procedure which would enable these non-contiguous territories to be included within the officially recognised status.

This procedure is annexed to the [report of the February 2018 Scientific Commission meeting](#).

THE OFFICIAL 2018-1

ACTIVITIES & PROGRAMMES

 OIE

Procedure for the publication of self-declarations of disease freedom

The OIE is pleased to report that the new Standard Operating Procedure (SOP) for the publication of self-declarations of disease freedom is available on the OIE website.

[Download the Standard Operating Procedure...](#)

Should an OIE Member wish to communicate and publicly state that its country, or a zone or compartment of its country, is free from a specific disease, the OIE offers visibility by publishing this self-declaration.

The information contained in the self-declaration remains the responsibility of the Delegate of the Member Country concerned.

[View the list of self-declarations...](#)

Please note that all self-declarations formerly published in the OIE *Bulletin* are now available [here](#).

THE OFFICIAL 2018-1

ACTIVITIES & PROGRAMMES

✘ PARTNERS

Entering a new phase of cooperation between the OIE and the Eurasian Economic Union

On 24 January 2018, the OIE Regional Representation in Moscow organised a first meeting in its new premises. In attendance were representatives from the Veterinary Services of Armenia, Belarus, Kazakhstan, Kyrgyzstan and Russia, comprising the Member States of the Eurasian Economic Union (EAEU). They were joined by Eurasian Economic Commission (EEC) leaders, and representatives of the OIE (both from OIE Headquarters in Paris and the Regional and Sub-Regional Representations), including Dr Jean-Philippe Dop, OIE Deputy Director General, and Dr Romano Marabelli, Special Advisor to the Director General of the OIE.

A **'Tentative Programme of activities to implement the Memorandum of Understanding between the OIE and the Eurasian Economic Commission (EEC) for the triennial period of 2018 to 2021'** was signed in December 2017 by Dr Monique Éloit, Director General of the OIE, and Mr Valery Koreshkov, Member of the Board (Minister) for Technical Regulation of the Eurasian Economic Commission. Mr Koreshkov, as well as Dr Evgeny Nepoklonov, Vice-Minister for Agriculture and Delegate of the Russian Federation to the OIE, have honoured the meeting of 24 January with their presence.

Participants discussed the inauguration of this Programme, which centres around activities designed to implement OIE standards in the EAEU. The primary aim is to eliminate foci of particularly dangerous animal diseases and, with this in mind, participants discussed issues related to integrating international standards and OIE recommendations into the legislation of the EAEU.

The meeting also provided an opportunity for participants to learn how to become more involved in the OIE's standard-setting process at the regional level, thus making a significant contribution to animal health in this part of the world.

ACTIVITIES & PROGRAMMES

REFERENCE CENTRES

News from the OIE/FAO FMD Reference Laboratories Network

The annual meeting of the OIE/FAO FMD Reference Laboratories Network was hosted by the Agricultural Research Council-Onderstepoort Veterinary Institute (ARC-OVI) in Pretoria, South Africa, during November 2017.

The purpose of the three-day meeting was to collate recent global FMD surveillance data, to review and update regional risk maps for FMD virus lineages and to identify priorities for vaccine quality control.

[Meeting minutes](#)

THE OFFICIAL 2018-1

ACTIVITIES & PROGRAMMES

☒ REFERENCE CENTRES

News from the East African Regional Laboratory Network for FMD

A meeting of foot and mouth disease (FMD) experts took place in Addis Ababa, Ethiopia, from 12 to 14 December 2017.

The participants reviewed the FMD situation and FMD laboratory diagnostic capacity in East Africa. Training priorities for laboratory diagnostics and approaches to sustain the network were agreed.

The meeting was supported by the OIE Laboratory Twinning Project on FMD between the World Reference Laboratory for FMD (WRLFMD), the Pirbright Institute (United Kingdom), and the National Animal Health Diagnostic and Investigation Center (NAHDIC), Ethiopia.

Representatives were present from the FMD laboratories of seven East African countries, as well as from WRLFMD, the Ethiopian Ministry of Livestock and Fishery, the European Commission for the Control of FMD (EuFMD), the Ethiopian National Veterinary Institute (NVI), the Ethiopian Agricultural Transformation Agency (ATA) and the Pan-African Veterinary Vaccine Centre (PANVAC).

ANIMAL HEALTH

✘ OFFICIAL DISEASE STATUS

Colombia – Establishment of an FMD containment zone

© OIE/María Julia Anguita

Since outbreaks of foot and mouth disease (FMD) were reported from Colombia on 24 June 2017, the officially recognised status of the 'FMD-free zone where vaccination is practised' [\[1\]](#) was suspended.

On 21 November 2017, Colombia submitted documentation to the OIE requesting an evaluation for the establishment of a containment zone. This was approved by the Scientific Commission for Animal Diseases.

The 'FMD free zone where vaccination is practised' status for the zone was therefore re-instated, taking effect from 11 December 2017, with the exception of the territory within the containment zone, composed of the Department of Arauca and parts of the Departments of Boyacá, Casanare and Cundinamarca Departments, as shown [here](#).

EXPERT REPORTS

✘ WORKING GROUP

Highlights from the Working Group on Wildlife

✘
© Torsten Mörner

Wildlife diseases around the world

Each year, the [OIE Working Group on Wildlife](#) (WGW) reviews some of the important wildlife disease events that have come to the attention of its members and their networks. There was much to review in 2017.

In Mongolia, as many as 55% of the total population of Saiga antelope (*Saiga tatarica mongolica*) died of peste des petits ruminants (PPR), together with ibex (*Capra siberica hagenbecki*), goitered gazelle (*Gazella subgutturosa*), bharal (*Pseudois nayaur*), and domestic small ruminants. Avian influenza viruses of the H5N6 and H5N8 groups caused mortality in wild and domestic birds in the Asia-Pacific rim, including the People's Republic of China, Chinese Taipei, Hong Kong, India, Japan, the Republic of Korea, Nepal, the Philippines and Vietnam, and H5N8 viruses caused many mortality events in Western Europe during the winter of 2016–2017. The spread of African swine fever from Eastern to Western Europe continued, and large-scale efforts were implemented to control chronic wasting disease (CWD) in Norway.

Major outbreaks of anthrax occurred in Tanzania, Namibia, Mozambique and Zimbabwe, particularly in hippopotami (*Hippopotamus amphibius*), but also in elephants (*Loxodonta africana*), zebra (*Equus burchelli*), wildebeest (*Connochaetes taurinus*), and various gazelle species. In Tanzania, Zambia and Zimbabwe, numerous human cases were reported in people who had handled or eaten meat from infected animals. The disease occurrences of note in Africa and the Middle East included plague in Madagascar, monkeypox in the Congo Basin, Marburg haemorrhagic fever in Uganda, Lassa fever in Nigeria, and Middle East respiratory syndrome coronavirus (MERS-CoV) in Saudi Arabia.

In North America, an outbreak of New World screwworm (*Cochliomyia hominivorax*) in white-tailed deer (*Odocoileus virginianus*) was successfully eradicated by a massive release of sterilised male flies. CWD continued to spread by natural means and human agency. Preliminary results from infection trials in macaque monkeys indicated that clinical CWD could be acquired by these old-world primates by consuming meat from affected animals.

This short summary of major disease events demonstrates the tight connections among diseases of wildlife, people and livestock. Understanding these connections is essential if the risks posed by these diseases are to be managed and reduced. **Surveillance and reporting of diseases in wildlife is the foundation for such understanding.**

THE OFFICIAL 2018-1

Knowledge of the occurrence of pathogens and diseases in wildlife is very important to both animal and human health

Reporting wildlife diseases to the OIE

Because knowledge of the occurrence of pathogens and diseases in wildlife is so important to both animal and human health, **the OIE asks all Members to report the occurrence of specific pathogens and diseases in wildlife that are not on the official OIE List of diseases**. Such reporting is voluntary but highly encouraged, and is a major objective of the appointment and training of the OIE National Focal Points for Wildlife. Currently, participation in this reporting is low. In the coming months, the OIE will take steps to simplify and encourage reporting of these diseases in wildlife by providing better guidance on reporting requirements for non OIE-listed diseases and enhancing communication with the OIE National Focal Points for Wildlife. The WGW urges all OIE Members to take part in this voluntary but important wildlife disease reporting.

Diagnostic test methods in wildlife

Many OIE National Focal Points for Wildlife and others seek information on the most appropriate methods to use to identify pathogens and diseases that are not on the official OIE List and thus not covered by the OIE *Codes and Manuals*. The WGW noted that useful guidance in such diagnostic techniques is available on line, including:

- [diagnosis cards](#) from the European Wildlife Disease Association (EWDA)
- [wildlife health fact sheets](#) from Wildlife Health Australia
- fact sheets in the [Transmissible Diseases Handbook](#) of the European Association for Zoo and Wildlife Veterinarians (EAZWV).

The Working Group undertook to search for reliable on-line sources of information on diagnostic methods that can be applied to specimens from wild animals for each of the non-listed pathogens for which annual voluntary reporting is requested from Member Countries by the OIE. This information will be provided to the OIE to assist Member Countries with wildlife disease surveillance and diagnosis. It should be complete by the next meeting of the Working Group in December 2018.

Wildlife health training manuals and workshops

The Working Group on Wildlife is an enthusiastic supporter of the training workshops offered by the OIE to its National Focal Points for Wildlife. Four cycles of these training workshops have now been completed and a fifth is under development. Each cycle consisted of five regional workshops on the same topics presented at a suitable venue for Asia, the Americas, Europe, Francophone Africa, and Anglophone Africa and the Middle East. A training manual was created for each cycle and these can be used for self-training or in classrooms.

 The manual for the first cycle provides a broad introduction to wildlife health and its relevance to the health of people and domestic animals. 

The manual for the second cycle provides a detailed overview of wildlife disease surveillance and includes data files that can be explored and analysed as learning exercises.

THE OFFICIAL 2018-1

The manual for the third cycle provides a 'how-to' course in wildlife health risk assessment in the context of international movement of wild animals, and then carry this risk assessment into actual decision-making, with an exercise in multi-criteria decision analysis.

The manual for the fourth cycle is in preparation and will provide practical information on wildlife disease surveillance with an emphasis on disease diagnosis. The WGW congratulates the OIE on the quality of these training workshops for OIE National Focal Points for Wildlife and urges all who are interested to make full use of these excellent teaching manuals which the OIE has made available to the world, free of charge.

The OIE asks all Members to report the occurrence of specific pathogens and diseases in wildlife that are not on the official OIE List of diseases

New Terms of Reference for the Working Group on Wildlife

The updated Terms of Reference for the Working Group on Wildlife were adopted by the World Assembly of Delegates in May 2018. The WGW's former Terms of Reference comprised advising the Scientific Commission on Animal Diseases (SCAD) on wildlife health issues. This important relationship with SCAD will continue but, in addition, the WGW will help the OIE as a whole with issues related to wildlife, and will support the Organisation and its Members to engage with climate change and biodiversity conservation imperatives. In December 2018, during its meeting at the OIE Headquarters, the WGW will plan and begin to implement activities around these new responsibilities.

✘ NEW MEMBERS COUNTRIES

THE OFFICIAL 2018-1

✘ NEW REFERENCE CENTRES

ACUTE HEPATOPANCREATIC NECROSIS DISEASE

Designated reference expert: **Dr Grace Chu-Fang Lo**

International Center for the Scientific Development of Shrimp Aquaculture (CDSA), National Cheng Kung University (NCKU)

No. 500, Sec. 3 Anming Road, Annan District, Tainan City 709
Chinese Taipei

Tel. +886-6-3842448

E-mail: gracelow@mail.ncku.edu.tw

This new OIE Reference Laboratory has a long-standing programme of work on shrimp diseases. Currently, CDSA's research includes the new, rapidly spreading shrimp disease acute hepatopancreatic necrosis disease (AHPND), which is caused by a pathogenic strain of the opportunistic marine bacterium *Vibrio parahaemolyticus*. This pathogenic strain acquires a plasmid that expresses a deadly toxin. To develop potentially useful measures to control AHPND, the laboratory often partners with public institutions and the private sector of OIE Member Countries to collaborate on the pathogenesis of AHPND in shrimp, and for studies on microbiome dynamics during possible outbreaks of AHPND in shrimp grow-out ponds.

CHRONIC WASTING DISEASE (CWD)

Designated reference expert: **Dr Sylvie L. Benestad**

Norwegian Veterinary Institute, National Reference Laboratory for TSE in animals

P.O. Box 750 Sentrum, 0454 Oslo

Norway

Tel. +47 97 53 68 30

E-mail: sylvie.benestad@vetinst.no

This new OIE Reference Laboratory has extensive experience in diagnosis of the transmissible spongiform encephalopathies (TSE) in small ruminants, cattle and cervids, and is the only Norwegian laboratory testing for TSE. The laboratory has a large collaborative network in Europe and North America and is particularly active in research, working on epidemiological studies and the characterisation of TSE strains. The TSE laboratory's activities are subjected to quality assurance and are accredited under [ISO/IEC 17025](#) by the Norwegian Accreditation Agency (NA).

THE OFFICIAL 2018-1

HIGHLY PATHOGENIC AVIAN INFLUENZA AND LOW PATHOGENIC AVIAN INFLUENZA (POULTRY) AND NEWCASTLE DISEASE

Designated reference expert: **Dr Viktor N. Irza**

Federal State-Financed Institution 'Federal Centre for Animal Health' (FGBI 'ARRIAH')
Yur'evets, Vladimir, 600901
Russia

Tel. +7 4922 26 18 67; +7 4922 26 06 14; mobile +7 910 774 01 99

E-mail: mail@arriah.ru; irza@arriah.ru

Website: www.arriah.ru

This new OIE Reference Laboratory is located in the Federal Centre for Animal Health (FGBI 'ARRIAH'), which operates under the auspices of the Federal Service for Veterinary and Phytosanitary Surveillance (Rosselkhoznadzor). The laboratories are also National Rosselkhoznadzor Reference Laboratories for avian influenza and Newcastle disease. They provide diagnostic services, undertake epidemiological studies and research projects, and conduct national proficiency tests (ring trials). The laboratories are accredited under [ISO/IEC 17025](#) by the Russian Federal Service for Accreditation. The scope of activities includes OIE compliant molecular, genetic, virological and serological methods. The laboratories are prepared to offer assistance in diagnostics and epidemiological studies to neighbouring countries.

INFECTIOUS BURSAL DISEASE

Designated reference expert: **Dr Xiaomei Wang**

Division of Avian Immunosuppressive Disease
Harbin Veterinary Research Institute (HVRI)
Chinese Academy of Agricultural Sciences (CAAS)
678 Haping Road
Xiangfang District
Harbin, 150069
People's Republic of China

Tel. +86-451-51 05 16 90; +86-451-51 05 16 94

E-mail: wangxiaomei@caas.cn

Website: www.hvri.ac.cn

This new OIE Reference Laboratory focuses on diagnosis, epidemiology, research into prevention and control, and other services relating to infectious bursal disease (IBD). Two vaccines and two IBD diagnosis kits have been developed. The laboratory also undertakes national and international research projects focused on the pathogenicity and immunological mechanisms of IBD. The laboratory has been accredited to [ISO 17025](#) by the China National Accreditation Service for Conformity Assessment (CNAS).

THE OFFICIAL 2018-1

INFECTIOUS HAEMATOPOIETIC NECROSIS

Designated reference expert: **Prof. Hong Liu**

Animal and Plant Inspection and Quarantine Technical Centre
Shenzhen Exit & Entry Inspection and Quarantine Bureau
General Administration of Quality Supervision
Inspection and Quarantine (AQSIQ) of P.R. China
Room 907 of 1011 building
Fuqiang Road
Futian Qu
Shenzhen
Guangdong Province, 518045
People's Republic of China

Tel. +86-755 25 58 84 10

E-mail: liuhong@szciq.gov.cn; szciqlh@sina.com

This new OIE Reference Laboratory undertakes research on emerging and exotic aquatic animal diseases in China, especially viral diseases, focusing mainly on pathogenicity, genomics, epidemiology and rapid detection methods. The Laboratory provides technical support for the national entry-exit quarantine competent authority and domestic fishery agencies in disease surveillance, investigation and analysis of exotic and emerging diseases, epidemiological analysis, import risk assessment of aquatic animals and their products, and in drawing up aquatic animal quarantine trade protocols and contract terms.

Prof. Hong Liu has worked in aquaculture for over 20 years.

INFECTIOUS HAEMATOPOIETIC NECROSIS AND VIRAL HAEMORRHAGIC SEPTICAEMIA

Designated reference expert: **Dr Kyle Garver**

Pacific Biological Station – Aquatic Animal Health Laboratory (PBS-AAHL)
Fisheries & Oceans Canada
3190 Hammond Bay Road
Nanaimo V9T 6N7
British Columbia
Canada

Tel. +1-250 756 73 40

E-mail: Kyle.Garver@dfo-mpo.gc.ca

The Pacific Biological Station is a government facility operating under the Department of Fisheries and Oceans, Canada. It houses the national reference laboratories for infectious haematopoietic necrosis virus (IHNV) and viral haemorrhagic septicaemia virus (VHSV), which conduct regulatory diagnostics under the National Aquatic Animal Health Programme to prevent aquatic animal diseases from being introduced to or spread in Canada. In this role, the laboratories administer proficiency panels and control samples for IHNV and VHSV real-time reverse transcriptase polymerase chain reaction (RT-qPCR) testing, work towards the standardisation of diagnostic methods,

THE OFFICIAL 2018-1

and perform confirmatory testing. In addition, through maintenance of a biosafety level 2 aquarium facility, the laboratories conduct research on endemic aquatic viral diseases, with investigations focused on evaluating strain virulence, host response, development of diagnostic tools and vaccine efficacy studies. The laboratories' activities are subjected to quality assurance and are accredited under [ISO/IEC 17025](#) by the Standards Council of Canada.

KOI HERPESVIRUS DISEASE

Designated reference expert: **Dr Sven M. Bergmann**

German Reference Laboratory for KHVD, Friedrich-Loeffler-Institut (FLI), Federal Research Institute for Animal Health, Institute of Infectology
Südufer 10, 17493 Greifswald - Insel Riems
Germany

Tel. +49-38351 71150

E-mail: sven.bergmann@fli.de

This new OIE Reference Laboratory is located at the Friedrich-Loeffler-Institut (FLI), the Federal Research Institute for Animal Health in Germany, which is an independent higher federal authority operating under the auspices of the Federal Ministry for Food and Agriculture. The laboratory, which is the German reference laboratory for koi herpesvirus disease (KHVD), is in direct contact with government and federal state authorities regarding the classical, serological and molecular diagnosis of KHVD (including high throughput sequencing). It designs plans for KHVD eradication, and is involved in the development of vaccines against the disease.

The Reference Laboratory also develops new test methods for the molecular, histological and serological detection of KHV, and conducts national proficiency tests (ring trials) for quality assurance procedures for animal disease diagnosis. The laboratory has extensive experience in diagnosing diseases of fish, molluscs and crustaceans. It is accredited for diagnostic techniques for notifiable diseases of fish, covering a wide range of diagnostic methods.

SALMONELLOSIS

Designated reference expert: **Dr Min-Su Kang**

Avian Bacteriology Laboratory, Avian Disease Research Division, Animal and Plant Quarantine Agency (APQA), Ministry of Agriculture, Food and Rural Affairs (MAFRA)
177, Hyeoksin 8-ro, Gimcheon-si, Gyeongsangbuk-do, 39660
Republic of Korea

Tel. +82 54 912 0818

E-mail: kangmskr@korea.kr

The Animal and Plant Quarantine Agency (APQA) is a government institute that is responsible for protecting animal health, animal welfare and plant health, and for undertaking animal and plant quarantine inspections in the Republic of Korea. This new OIE Reference Laboratory for salmonellosis is also the national reference laboratory for *Salmonella* in poultry. The laboratory develops new diagnostic methods and vaccines and conducts molecular

THE OFFICIAL 2018-1

epidemiological studies. The laboratory also performs confirmatory tests for the diagnosis of *Salmonella* infections in animals, and provides scientific and technical assistance and training to personnel from diagnostic laboratories in the Republic of Korea and other OIE Members of the Asia-Pacific region.

VIRAL HAEMORRHAGIC SEPTICAEMIA

Designated reference expert: **Dr Hyoung Jun Kim**

Aquatic Animal Quarantine (AAQ) Laboratory, National Fishery Products Quality Management Service (NFQS),
Ministry of Oceans and Fisheries
337 Haeyang-ro, Yeongdo-gu, Busan, 49111
Republic of Korea

Tel. +82-51-400-5653

E-mail: hjkim1882@korea.kr

The National Fishery Products Quality Management Service (NFQS) is the competent authority for quarantine of aquatic animals imported into and exported from the Republic of Korea. The new OIE Reference Laboratory for viral haemorrhagic septicaemia (VHS), hosted by the NFQS, provides expertise on validation of molecular methods for VHS diagnosis. In addition, it provides scientific and technical support as well as training in diagnosis for VHS and fish rhabdoviral diseases. The laboratory also offers, at the international level, high quality diagnostic services using molecular and virological tools. The laboratory undertook a research project jointly with the OIE Reference Laboratory for VHS in Denmark that led to the development of a novel reverse-transcriptase polymerase chain reaction, which had the same sensitivity of detection as the cell culture method. The test has been submitted for consideration by the OIE Aquatic Animal Health Standards Commission for inclusion in the [chapter on VHS in the OIE *Manual of Diagnostic Tests for Aquatic Animals*](#).
